

Ungheni City is an example of waste management and for many years it is known as one of the cleanest and most arranged urban localities from the Republic of Moldova

Ungheni City Hall has a great experience in waste management, the city salubrity system is adjusted to the European standards over 70%.

Waste management in Ungheni City is ensured by two municipal enterprises:

- Municipal Enterprise „Ave-Ungheni” is collecting selectively domestic waste in containers placed on the well-arranged platforms near the blocks of flats, public and private organizations, as well as in residential quarters.

- Municipal Enterprise „Communal Services Ungheni” is collecting street waste in pending containers placed on the city streets.

Ecological education of pre-schools in the kindergarten: good practices and practices of ecological education of preschoolers

Within the Sensitizing Campaign „Take part in the selective collection of recyclable waste – protect the environment!” in the Kindergarten „Steluta” from Ungheni City, there was implemented the Project „Hear our voice. I am small, but I know: stop the disaster, tomorrow may be late” that has a strong impact on children and parents. Through different practical exercises for environment care with the topic “We care for nature, we want to live healthy!” and selective waste collection actions, the pre-schools strengthened their skills and abilities of environment protection and proved that they have a positive attitude towards environment protection. Together with their educators, the children elaborated fliers with ecologic messages and urges of environment protection that they distributed to the passers-by during their walks in the park near the kindergarten.

The suits and ecological sets made together with the parents and educators from recyclable materials (paper, cardboard, plastic, etc.), containers made especially for waste and pads with ecological drawings and urges of environment protection installed on the playing ground, ecological posters and edited books „Tests with ecologic content”, „Games with ecologic content” within the project, as well as other mobilizing activities contributed to informing, sensitizing and awaring general public on the necessity and importance of environment protection.

TOGETHER FOR A HEALTHIER ENVIRONMENT IN UNGHENI CITY!

On the occasion of celebrating Cleanness World Day, on September 25, 2014, the pre-schools from the kindergartens and pupils from the schools of Ungheni City, Republic of Moldova, accompanied by educators and teachers, participated at a range of extracurricular demonstrative activities in the spirit of education for a healthier environment.

The objective of these civic demonstrative greening actions was to sensitize the inhabitants of Ungheni City on the educational ideal and the fact that the qualitative education has as aspirations a clean and civilized environment.

Such educational actions had motivation, because the educators from the kindergartens and teachers from the schools of Ungheni City understand well the citizen's role in maintaining cleanness in the community and make efforts for inducing and developing to children and pupils love for nature and for stimulating the duty and responsibility feeling in protecting and keeping a healthy environment.

With an enthusiasm specific to a good householder, 650 pre-schools and 1440 pupils from gymnasium and lyceum forms cleaned the yards and their surroundings of the kindergartens, the territory and neighbouring areas of the schools, the Square „Grigore Vieru” and French Park near the Palace of Culture, etc., proving that the saying „The man sanctifies the place” is true. Thus, together they felt the joy of labour, communing with nature, as well as the responsibility towards a healthy environment.
